AutoCafe

Model AC-501 and AC-501C

USER INSTRUCTIONS – READ BEFORE USING

The AutoCafe mobile cup warmer is designed to provide heat to a disposable paper or foam cup, thereby slowing the rate of cooling of hot liquids such as coffee or tea as purchased from convenience stores and coffee shops. The heater plate is located on the bottom of inside of the device and will get hot during use. There is no risk of burning an empty paper or foam cup. You can also use any non-insulated similarly shaped cup such as porcelain.

The AutoCafe has two on/off switches built in: an ON/OFF button on the top which features a blue LED that lights when on, and a switch in the lower half of the inside of the device that is activated when a cup is inserted and presses against it. When the cup is removed, the device is deactivated and the blue LED light goes out. Replacing the cup into the AutoCafe turns it back on.

The AutoCafe has two removable spacers for the inside of the device. The smaller, most commonly used spacer is already in place in the device. Depending on the diameter of your cup, choose the spacer that provides the best fit of the cup in the device. A proper fit will provide:

- A snug but not too-tight fit. When you lift the cup it should come out easily.
- Activation of the inner side on/off switch. When the cup is inserted the device should turn on.
- Minimal rocking around. The cup should not bounce around, or hot liquid may spill.

You can also opt for no spacer in the case of the fattest foam cups.

The AutoCafe warmer is designed for cars and trucks featuring built-in cup holders as part of their design. If your car or truck does not have a cup holder that can securely hold the AutoCafe, we must recommend against use.

We recommend the AutoCafe be used on 12VDC power outlets controlled by the ignition switch so that the power is turned off when the vehicle is turned off. If you don't have an ignition-controlled outlet in your vehicle **BE SURE TO REMOVE THE CUP** or turn the device **OFF** by pressing the ON/OFF button when exiting the vehicle or otherwise not in use. Or you can unplug the device. Failure to turn off can result in a dead battery in 5 to 7 days.

TO USE:

- 1) Place the AutoCafe into the best fitting cup holder in your vehicle. The AutoCafe should fit flat and stable into the cup holder. It should not rock back and forth nor fail to sit all the way down.
- 2) Locate the desired 12V DC power outlet. If available, choose a power outlet that is controlled by the ignition switch, meaning that when the vehicle is running, the outlet has power; and when the vehicle is turned off, the outlet has no power. See above instructions.
- 3) Untie the power cord. Plug into the 12VDC power outlet and adjust the cord wire length appropriately, arranging or tying back up the excess power cord so it does not drape into the driver side of the vehicle.
- 4) Insert your favorite 12oz to 20 oz paper or foam cup into the AutoCafe. It should sit on the bottom and not rock around. For most 16 oz cups, the smaller spacer (already in place) will be correct. If your cup moves around more than you would like, or is narrow and does not activate the inner switch, change the spacer to the thicker spacer. If you are using a 20 oz foam cup or other very wide base cup, you may find removing the spacer is best. See above instructions.
- 5) When exiting the vehicle, if power remains in the outlet, remove the cup and/or unplug or turn off the AutoCafe. See above instructions.
- 6) To clean, use a damp cloth and wipe plastic surfaces. Do not use chemicals, or immerse in water and do not hold it under a faucet to wash the inside. Do not get the plug or inner heater area wet.
